

TEACHING STATEMENT

INSPIRED BY WHITNEY HOUSTON

I believe that undergraduates are the future, teach them well and let them integrate. Show them all the beauty in an ε ! Give them a chance at probability; make it easier. Let the students' computers remind them how to differentiate.

Everybody's searching for a factor, people need a sine table they can look up things, I never found one with the identities... What is $\sin(2t)$? Is it just 2 times $\sin(t)$?

I decided long ago, never to look up answers in the back; if I fail, if I succeed, at least I know the natural log of 3, no matter what they take from me, they can't take away my trigonometry...

Because the greatest function of all is Euler φ ... I found the greatest function of all in number theory...

The greatest function of all is easy if n is three... counting relative primes, is the greatest function of all...
